### **REASONS FOR ALLOWANCE**

1. The following is an examiner's statement of reasons for allowance. The prior art made of record in the attached form PTO-892 considered to be pertinent to the submitted application.

Kawabata et al. US # 5,608,300 teach an inductance based electrical angle detection unit in synchronous machine. Wherein the voltage application unit 130 determines the voltage applied between the respective coils of the three-phase synchronous motor 40 to generate electric currents  $I_u$ ,  $I_v$ ,  $I_w$  of the respective phases U, V, W of the motor 40. Kawabata et al teach that inductance L of the circuit is a function of an electrical angle of the rotor 50. Under the stationary condition rotor does not rotate, the inductance L of the circuit is determined by electrical angle of the "d" axis of the rotor 50 electrically formed against the "q" axis.

Naidu et al. US # 5,144,564 disclose a rotor position estimation for a pm synchronous machine wherein various parameters related to the machine under rotating condition are calculated. The initial rotor position is estimated, beside the others, based on stator q-axis, rotor angular velocity and quadrature q-axis inductance.

However, none of the prior art teaches or suggests defining the quadrature-axis magnetic inductance in combination with other limitations, such as:

- Starting machine with a reduced load;
- Keeping the rotor angle at zero;
- Controlling the load angle at 90 degrees.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
